#### Our Customers Say:

"I just wanted to say thanks. When buying through a company that has much better prices than the other guys, you expect a very poor selection. If you're lucky enough to find a place with very good prices and a great selection, you'd be an idiot to expect even average customer support. Well, Liz Smith was very quick, very nice and extremely helpful. I can't wait to do business with Jameco again."

**A  
Proud  
American  
Family Business**

The Jameco team would like to dedicate this issue to its founder – Dennis Farrey. Twenty-eight years ago Dennis started a new electronic distribution company and named it after his six-year old son, James. As you can imagine, he took great pride in the business and the name, Jameco. Dennis' pride overflowed into every facet of the organization, but especially in how the company's customers were taken care of – through great customer service. It is this inspiration that steers the Jameco team today in our own relentless drive for total customer satisfaction. Thanks Dennis.

James joined our organization several years ago and now heads up Sales and Customer Service, helping to insure the tradition lives on. James is just one of our team members that carries on his father's concern for the customer with great resolve, as you'll see from the e-mail below. Discover the Jameco difference now... we believe you won't be disappointed.

## Resettable Fuses

Resettable fuses improve reliability at lower cost. Polymer positive temperature coefficient (PPTC) fuses have provided designers in numerous industries a new tool in their battle to improve product quality & performance. As PPTC fuses are resettable, warranty costs & service calls are largely avoided.

#### WBU5 Series Key Features:

- Horizontal assembly corresponds to the operation flow design of the PC boards for handy operation
- Round hole design makes the electric connection better
- Formed with V-shaped cross-sectional groove, which allows DIP IC pins to be inserted across two parts and to increase the rate of utilization due to small pitch
- Dovetail protrusions and recesses designed to connect two adjacent parts tightly together

#### JE Series Key Features:

- Use to breadboard and debug circuit designs
- Low static, plastic body – CMOS safe
- Nickel-plated clips designed to withstand up to 5,000 insertion cycles
- Breadboard strips connect together to form larger working areas
- Components are easily interconnected using 20-28 AWG wire (P/N 19289 & 20079, below)
- Some models feature heavy-duty aluminum backings (JE24, JE27, WBU504)

**The Basics of PC-Based Data Acquisition, Analysis, and Control**

Using your PC as a platform for the acquisition, analysis and control of physical data is both powerful and economical. Simply adding a card with analog and digital data acquisition and control capability, or a module connected via a serial port, along with easy-to-use software, turns your desktop or laptop computer into a sophisticated instrumentation system.

A PC-based data acquisition and control system is comprised of five fundamental elements: sensors/transducers, analog-to-digital conversion with signal conditioning, digital sensing, analog and/or digital control, and software. The first consideration is the physical parameter or condition you wish to measure & record; it

could be temperature, pressure, acceleration, vibration, sound intensity, and much more.

Transducers convert physical parameters to electrical signals. Many transducers require signal conditioning (amplification, filtering, etc.), which is usually provided by the data acquisition card.

For most PC-based data acquisition systems, analog-to-digital conversion is typically handled with a plug-in board or card – commonly known as DAQ boards (PCI, ISA or PCMCIA type). Alternately, a DAQ module connected via a serial port can be used. The key function of a DAQ board or module is to convert the analog signals coming in from the sensors into digital

**See Sensors  
On Page 77**

signals with which the PC can deal. The primary specifications to look for are number of channels, resolution, and sample rate.

Virtually all DAQ boards and modules also have the capability of sensing digital input signals; for example, switch contacts. These signals are often used to initiate acquisition of analog data.

Once the data has been acquired & processed by the PC, the analog and digital output capability of a DAQ board can be used for control; i.e., "closing the loop".

A popular software program, SoftWIRE, is built in two windows. The first window holds the graphical program while the other window holds the user interface on a Visual Basic form.

**12-Bit Data Acquisition Module w/ RS232 Interface**

This data acquisition module offers 11 channels of 12-bit A/D inputs, 3 digital inputs, and 3 digital outputs. A/D inputs measure voltages from 0 to 5VDC. Digital inputs sense On/Off states with a range of -30 to +30VDC. Digital outputs control devices requiring 0 to 5VDC input voltage. Automatic baud rate detection from 1200 to 9600 baud with format of 8 data bits, 1 stop bit, and no parity.

- 120 samples/sec. for a single channel
- I/O line connectors: DB25 female
- RS-232 connector: DB25 female
- Logging utility

**Requires:** 12VDC power supply (recommend P/N 100095, pg 59)

Part No.	Description	1	10
198088	RS-232 12-bit	\$58.95	\$52.95

**16-Channel Digital I/O & Buffer Modules w/ RS232 Interface**

This digital module can control up to 16 digital inputs or 16 digital outputs. Automatic baud rate detection from 1200 to 9600 with a format of 8 data bits, 1 stop bit, and no parity. The digital I/O buffer module (P/N 198109) provides buffering & increased power handling (100mA). It offers I/O lines that can handle control voltages up to 50VDC. Plugs directly into the digital module through the DB25 connector. Enclosure for the digital I/O buffer module is available.

- RS-232 connector: DB25 female

**Universal Library & Graphical Programming Software for Visual Basic**

**194010:** The Universal Library is a library of 65+ syntax commands in different programming languages. The library provides these commands plus the syntax format in its respective language.

**194044/194036/194028:** SoftWIRE is a graphical programming package for Visual Basic; one window holds the graphical program while the other holds the user interface on a Visual Basic form. By simply using the 130+ functions included with the software, you can click on the function, make connections to the controls with wires, provide your options, then run the program. While you are creating all these functions and connections, the software also provides the code in Visual Basic.

## What is An H8 Data Logger?

An H8 data logger is a small battery-operated electronic instrument that measures and records physical parameters over time such as temperature, humidity, light intensity and any physical value represented by a DC voltage. They are equipped with a microprocessor, data storage, and sensor. Some models allow the use of external sensors.

The data logger is connected to a personal computer (cable supplied) and the turn-key BoxCar software is used to select logging parameters such as sampling intervals and sampling period. Start time is also programmed and determines when the logging is initiated. The data logger is then disconnected from the PC and deployed in the desired location to begin taking measurements.

Used mainly in remote areas or anywhere the convenience of battery power is wanted. They are ideal for those involved with field studies, transportation monitoring, HVAC, troubleshooting, quality studies, general research, and educational science.

Examples of typical applications are: deployed in Alaskan glaciers in the hopes of finding answers to the global warming concerns; used by Cascade Designs, makers of Thermo-Rest® sleeping bags, to determine thermal comfort ratings of their outdoor products; the state of Kansas used the data loggers for fuel savings evaluations in residential homes; helps to improve the performance of radio controlled race cars; and manage many aspects of a Laundromat business.

## 4-Port RS-232 Smart Switch/Port Combiner

Often called "line sharers" or "code activated switches" this smart switch can be used to connect one RS-232 port to four or more different serial devices. This switch can be controlled in two ways: 1) referred to as "smart switch mode", the switch is controlled by sending a preamble (usually three characters) to the master port. One character of the preamble code is user programmable by internal switch setting.; 2) referred to as "port combiner mode", a slave port can gain access to the master port by asserting a handshake line (RTS for DTE slave ports, CTE for DCE slave ports).

- Supports TD, RD, RTS, and CTS
- Baud rates from 1200 to 115.2kbps (internal switch selectable)
- Master port connector: DB25 female
- Slave port connector: 4 each DB9 female

These unique nickel-titanium alloy Muscle Wires® actually shorten in length when electrically powered, and can lift thousands of times their own weight.

- Length: 1 meter

**How it works...** Pressing the switch lets power flow from the batteries through the Muscle Wire®, heating it and causing it to contract and raise the lever and lift the weight. When power is removed, the Muscle Wire® cools and relaxes, and the weight helps it return to its starting position.
